Concrete Tank Services

# EXTEND THE USE OR LIFESPAN OF ANY CONCRETE TANK

Across the country, communities and companies face a common challenge – water and wastewater infrastructure is aging. Solutions built years ago may no longer serve today's purposes. And while DN's prestressed concrete tanks are designed to last decades with little to no maintenance, many other types of concrete tanks do not meet this standard. Building new is one option, but not the only one: aging and underperforming assets can increase their life span with sustained care and action.

DN understands that meeting the challenge takes both new construction and maximizing the life of existing water-retaining structures – through service life extension and repurposing. We use our concrete tank design and construction expertise to support our clients in extending the useful life of their tanks by rehabilitating, repairing or repurposing existing structures economically.

Our collaborative working style is particularly suited to this area: It takes significant expertise and teamwork among the owner, engineer and contractor to ensure a successful rehabilitation, repair or modification. We always begin by fully understanding your needs and what you hope to achieve with your existing structures. From inspection to rehabilitation, repair or modification solutions, we address your specific priorities, capabilities and budget to determine the best approach for your project. DN is ready with turn-key design and construction for all concrete tank services work. By working with a contractor with a true focus and specialization in this area, you can be sure of high-quality workmanship that extends the utility of your concrete tanks for years to come.

## DN CONCRETE TANK SERVICES READY TO EXTEND THE LIFE OF ANY CONCRETE TANK

- **Responsive —** dedicated team to manage inspection, rehabiliation and retrofit needs nationwide.
- **Solutions Oriented —** engineering solutions for all types of concrete retaining structures.
- **Experience —** knowledgeable field crews and professional engineers who have worked in the concrete tank industry for decades.
- **Reinvesting in the Local Economy —** use of materials, labor and equipment from within the community.
- **Reliable —** partnering with you before, during and after the project.
- **Turnkey Design —** able to provide custom designs to meet your specific project requirements.

**The Right Partner — Just in Time.** Whether you need our services to meet your inspection requirements or due to issues with an existing tank, we'll make sure our work will let your tank deliver maximum performance now and down the road. We'll share with you improvement options and be sure your tank is up to all safety and regulatory codes. You'll rest easier knowing your tank has been serviced by an industry leader with a national reputation for integrity, quality and support.

# INSPECTION SERVICES

Experienced engineers are deployed to evaluate your tank, address concerns, and create a comprehensive evaluation report with recommendations for improvements.

# AESTHETIC & ARCHITECTURAL IMPROVEMENTS

We understand that your sytem is also a sense of pride to you and your community.  Whether a mural, brick façade, EIFS, a cleaning or fresh coating, DN can help you navigate your design to fit your needs.

Before

After

# STRUCTURAL MODIFICATIONS & RESTORATION

Our skilled team of design engineers and experienced construction staff work in unison to analyze and develop turnkey solutions for a variety of structural improvement projects.

Before - Existing tank dome replacement

After  - New tank dome replacement

# PROTECTIVE COATINGS

Ability and knowledge to evaluate, recommend, and install a variety of coatings to best fit the needs of your water, wastewater, and industrial tanks.

# SAFETY, ACCESS & SECURITY

To assist you in complying with new regulatory, safety, and security requirements, DN offers a variety of retrofit solutions to modify or upgrade your existing tank.

# PIPE MODIFICATIONS

Retrofitting is a logical, economical, often necessary way to increase the efficiency of your current system to meet changes in operational needs. DN offers turnkey solutions to provide watertight penetrations into existing tanks while maintaining its structural integrity.

# WATER QUALITY & EQUIPMENT

Our experienced team is poised to take on any upgrade your system requires from construction of baffle walls, installing new equipment or circulation and cleaning systems to meet evolving water quality requirements.

# SEISMIC UPGRADES

Retrofitting existing infrastructure is often a cost effective solution to make tanks designed to previous standards more resilient during a seismic event. We have a variety of seismic upgrade solutions for all types of concrete tanks.

# WE KEEP THE WORLD'S MOST PRECIOUS RESOURCE SAFE.
