BUILT
FOR THE FUTURE

WE KEEP
THE WORLD'S
MOST PRECIOUS
RESOURCE SAFE.

At DN, we believe in working with purpose. Everything we do, from the field to the office, contributes to one collective goal – keeping the world's most precious resource safe.

Businesses, governments and communities around the world understand that few things are more essential to health and well-being than the management of water and wastewater.

At DN, we make this possible with durable storage solutions for potable water and for wastewater that could otherwise contaminate the water supply. Our people draw upon decades of proven expertise to create the highest quality and lowest maintenance solutions for communities and private industries throughout the country.

TANKS FOR TOMORROW, PROVEN BY THE TEST OF TIME

Since 1929, DN has been perfecting the design and construction of the AWWA D110 prestressed concrete tank. Delivering decades of virtually maintenance-free performance, these tanks serve a spectrum of client needs from water and wastewater storage to thermal energy storage solutions. We've built over 3,500 tanks that are servicing communities throughout the U.S.

WHY A DN TANK?

- **Best Long-term Value** – No coating required, which eliminates routine maintenance costs and downtime.
- **Durability** – proven reliability through weather extremes, including fire and freeze thaw events, tornadoes and hurricanes.
- **Reinvesting in the Local Economy** – use of materials, labor and equipment from within the community.
- **Wall Compression** – flexible floor-wall connection, prestressed concrete walls and the embedded steel diaphragm (for type III) or vertical wall compression (for type I). Provides longevity, durability, and liquid tightness.
- **Seismic Resilience** – proven performance through Loma Prieta, Nisqually and Northridge earthquakes, and Northridge earthquakes.

No matter your specific application, an AWWA D110 prestressed concrete tank provides unrivaled flexibility, durability and long-term affordability.

GETTING TO THE RIGHT TANK, TOGETHER

The benefits DN delivers begin well before any job starts. From the moment you first consider the possibility of a tank, we're at your side to help ensure success. What's the right overall solution? How do you balance current needs with future possibilities? How do you ensure maximum value over time? As your trusted partner, our demonstrated track record means that we understand the questions you will face, and our answers have proven to last for generations.

- **Capacity Flexibility** – range from 40,000 gallons to 50 million gallons.
- **Custom Dimensions** – liquid heights from 8' to over 100' and diameters from 25' to over 400'.
- **Siting Options** – at grade, partially buried, or fully buried (with multi-use capabilities).
- **Enhanced Water Quality** – concrete inherently insulates, keeping liquids at a more consistent temperature.
- **Roof Types** – dome, flat slab roof, or open top.

HOW WE DO WHAT WE DO

At DN, our culture means a way of working that comes through every day both in the office and in the field, among our own people and with our clients.

We call it the “DN Way” and it’s grounded in our fundamental mission – to provide the highest quality liquid storage design and construction services at the best long-term value with an unrivaled customer experience.

No matter our individual roles, each of us is dedicated to achieving this mission for you. **We also commit to a set of shared values that define not just what we do but how we do it.**

SEND EVERYONE HOME **SAFE**

WE NOT ME

INTEGRITY SEEN AND UNSEEN

GRIT TO GO THE DISTANCE

BRING THE **WOW!** FACTOR

At DN, the proof of our Mission and our Values are how they show up in our people and how we work with you every day.

THE MARKETS WE SERVE

MANAGING OUR MOST PRECIOUS RESOURCE: WATER STORAGE

In order to thrive, all communities need access to clean, potable water. DN provides safe, reliable and low-maintenance storage tanks that water utilities rely on. We have constructed thousands of tanks in the water market, using our design and construction expertise to address the specific needs of each unique application.

PROTECTING AND MAINTAINING HEALTHY COMMUNITIES: WASTEWATER STORAGE

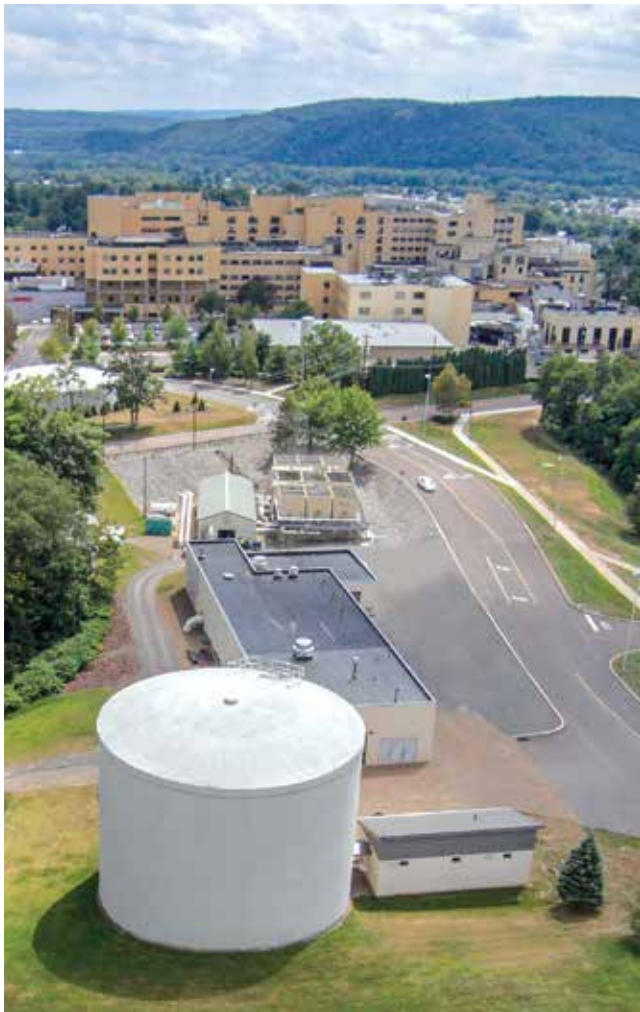
Treating wastewater and returning it safely to our environment is as essential to healthy communities as potable water. DN has the experience and customization capabilities to provide storage solutions throughout the wastewater collection and treatment process. We have constructed prestressed concrete tanks to address collection, treatment, biosolids, and reclaim/reuse needs, for companies and communities around the country.

BEYOND BUILDING NEW: CONCRETE TANK SOLUTIONS (CTS)

Communities and companies around the country consistently face a fundamental challenge: Our nation's water and wastewater infrastructure is aging and in need of sustained care. We can't simply build our way out of this challenge – a range of options is needed. While our own tanks are built to deliver decades of virtually no-maintenance performance, we're also able to extend the useful life of your other concrete tanks, regardless of who built them. We use our concrete tank design and construction expertise to rehabilitate, repair or repurpose existing concrete structures – effectively and economically.

PART OF THE ENERGY MIX: THERMAL ENERGY STORAGE

As communities, companies and institutions seek to diversify their green energy mix, Thermal Energy Storage (TES) can be a beneficial part of the solution. Using heat differentials, TES systems can provide a range of energy cost savings, such as reducing peak electric load by shifting usage from on-peak to off-peak periods.



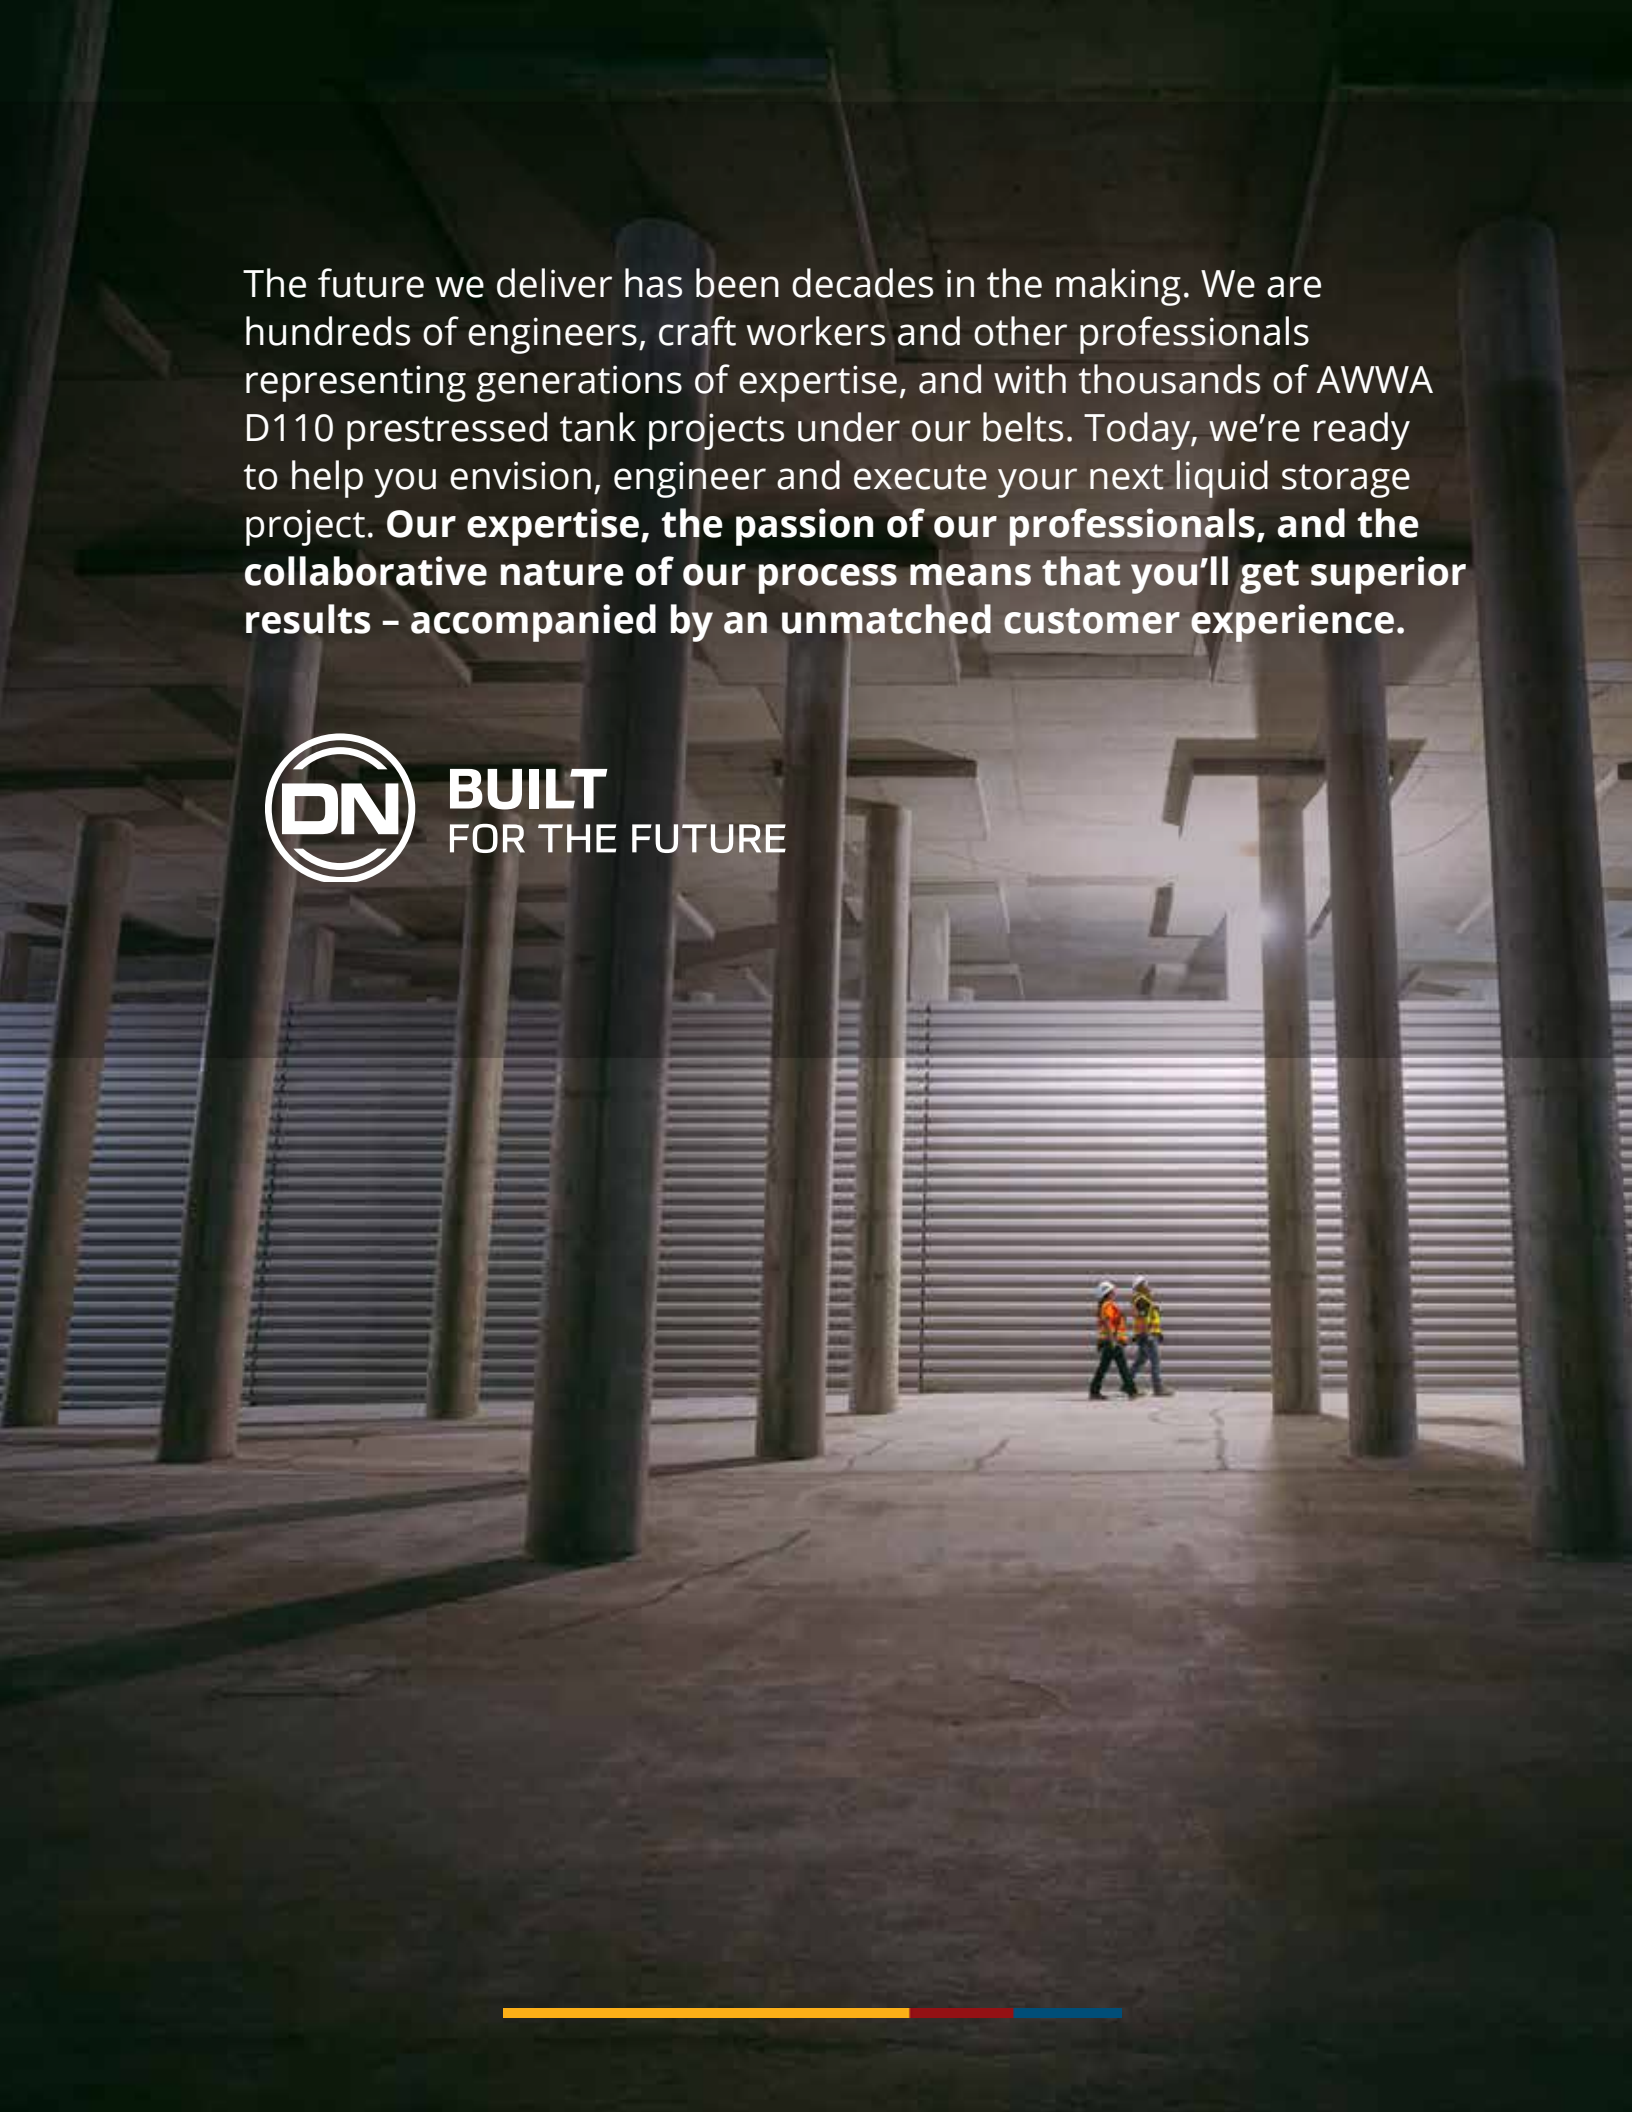
BUILDING COMMUNITY

DN

Scholarships | The DN Tanks Foundation | Volunteering

We know that things work best when everyone pitches in. That's why we repay our good fortune with a commitment to giving back. We "contribute forward" in a number of focused ways that we call Building Community. The initiative includes sponsoring scholarships, financially supporting local non-profit organizations, and enabling employees to volunteer their time and talents.

Our Building Community programs enable us to contribute both as a company and as individuals. Our employees are already deeply engaged in the communities where we live and work. Supporting these efforts and building upon them isn't just part of our corporate philosophy, it's something deep in our fiber. In addition to the work we do with clients every day, Building Community is one of the primary ways we put our shared values into practice.



The future we deliver has been decades in the making. We are hundreds of engineers, craft workers and other professionals representing generations of expertise, and with thousands of AWWA D110 prestressed tank projects under our belts. Today, we're ready to help you envision, engineer and execute your next liquid storage project. **Our expertise, the passion of our professionals, and the collaborative nature of our process means that you'll get superior results – accompanied by an unmatched customer experience.**
